- b) Mum, can I go to the cinema, please?
- c) Are you allowed to go to the cinema, mum?
- d) Could I go to the cinema, please?

**III. Reading comprehension**

The Australian crocodile is the largest crocodile in the world. It can grow up to seven metres long and can weigh up to 1000 kilos. It has only two muscles to open its mouth but 40 to close it. Its jaws can exert a pressure of seven tons. The crocodiles can be found all across the north of Australia. They eat mainly fish, turtles and wading birds, but they can kill and eat much larger prey like wild pigs, buffaloes and horses.

What makes crocodiles so dangerous is that they attack incredibly quickly and they take their victims under the water to drown them. They usually attack in the water, but they can suddenly come out of a river and attack animals or people, and they can run on land at 17 km/h, the same speed as ordinary people can run.

Every year in Australia there are crocodile attacks on humans. Two years ago a 24-year-old German tourist died when she went for a swim in a lake. Although there were signs warning people that there might be crocodiles, the girl and her friend decided to have a midnight swim. The girl suddenly disappeared and next morning her body was found. Near it was a four-metre crocodile.

And only last month two Australian boys watched in horror as their friend was killed by a crocodile when they were washing their mountain bikes in a river. They climbed a tree and stayed there for 22 hours while the crocodile waited below.

But you can survive a crocodile attack. Last year, Norman, a 19-year-old boy was saved from a crocodile when his aunt hit it on the nose. The crocodile suddenly opened its mouth and the boy escaped.
