Dinosaurs

Dinosaurs lived on Earth for more than 100 million years and suddenly they disappeared. The reason they died out is one of the great mysteries of science.

Allosaurus was a large dinosaur from the Jurassic period. It was a carnivore. It could be over 12 meters long and weighed about a ton. It had a long, heavy tail and sharp teeth, which looked like a saw. It hunted other dinosaurs for food.

Velociraptor was one of the fastest and smartest of all the dinosaurs. It had wings like a bird, but couldn't fly. It was like a huge chicken, about 1 to 2 metres long, with a very long tail. It was strong and could kill other animals with its sharp claws. This made it a very dangerous dinosaur, able to catch animals that were much larger than itself!

Sauroposeidon was the largest dinosaur that ever lived. It grew up to 18 metres tall and weighed as much as ten elephants! But it wasn't dangerous. It wasn't a meat eater. Actually, it used its long neck to reach the leaves of tall trees. It was around thirty times larger than a giraffe, with a neck as thick as a tree trunk!

T-Rex was one of the biggest dinosaurs. It was heavier than two elephants with a huge head and large pointed teeth. It was 12 metres long and about 6 metres tall and weighed about 7 tons. It had tiny arms, each with two fingers. Its feet looked like a bird's. Its slim, pointed tail helped it run very fast. T-Rex was a very dangerous meat-eating dinosaur that could eat up to 230 kilos of meat in one bite.
